

# Coding Dojo – New Generation

## *Coding Kwoon*

Rodolfo Henrique Carvalho  
郝多福

中国北京，2013年2月28日

# About me, this talk and you

- Founder of the Coding Dojo Rio group in Brazil (2008)
- Computer and Information Engineer (Federal University of Rio de Janeiro, 2012)
- This talk is a (very) short version of a new way to talk about Coding Dojos, a deviation from the more traditional approach

# The Foundation

Practicing principles and practices from Agile methodologies

+ TDD

# The New Generation

Programming is not just about writing code.

It is also about:

- **communication**
- **sharing** ideas and knowledge
- comprehend that different people have **different points of view**
- expressing **intentions** about some reality

I believe that learning without being able to communicate whatever it is that you're learning has no point.

# A Coding Kwoon

- **Exercise** a set of skills that we believe are important in the life of people (perhaps not just programmers)
- **Learn** more about yourself, share what you know and learn with others
- The **environment** you would like to have to perform better and happier in your daily job.
- Learn **new languages**
- **Explore** details of languages you already know

# Lessons learned

- **People** have different skill levels
- Skills and **expressibility of ideas** depends upon the language at hand
- **Food & drinks** are a great companion for programming
- No matter how hard it is, keep it **constant**
